TANK MODIFICATIONS

RAISING | LOWERING | TANK REPLACEMENT

Water systems are complex to operate, and often require adjustments to existing structures to ensure efficiency throughout the system. Phoenix Fabricators & Erectors, Inc. is not only the industry-leading provider of tank modifications, but is also the largest tank manufacturer in this market. The tank modification market includes the raising and lowering of all styles of tanks (whether they are ground or elevated structures), as well as replacing containers of existing tanks.

Many owners have found that raising their tank provided the extra pressure they needed without having to add booster pumps or a new tank. Our experience includes modifying tanks ranging from 50,000 to 3,000,000 gallons. Phoenix has raised or lowered over 100 tanks, some as much as sixty feet.

Modifying or relocating an existing tank is often a flexible and cost-effective alternative to new tank construction. Additionally, the amount of time your tank is out of service is only a fraction of the time required to build a new tank.

Phoenix offers comprehensive modification solutions to help ensure that your tank is always performing optimally. For a free evaluation of your tank, or for more information regarding this exciting and dynamic solution, please contact Phoenix at 1-270-318-1217 or visit our website at www.phoenixtank.com
